

## 06- Clean Water and Sanitation

### 06-02 Water Consumption per Capita

06-02-01

Does your university, as an entity, measure the total volume of water used on campus, sourced from network supplies, desalination, or extracted from rivers, lakes, or groundwater aquifers?

**Our university does not measure the total volume of water used on campus.**

06-02-01-01

Volume of water used at the university: incoming (treated/extracted water)

**No data**

06-02-01-02

Campus population

**Students: 11 335**

**Lecturers: 707**

**Worker: 502**

### 06-03 Water Use and Conservation

06-03-01

Does your university have a process for treating wastewater?

**Our university does not have a process for treating wastewater, external sewage treatment plant.**

06-03-02

Does your university, as an entity, have procedures to prevent contaminated water from entering the water system, including pollution caused by accidents and incidents on campus?

**Yes, our university has procedures to prevent contaminated water from entering the water system, including measures for accidents and incidents, e.g., safety protocols,**

06-03-03

Does your university, as an institution, provide free drinking water for students, staff, and/or visitors, such as (drinking water fountains)?

**Yes, our university provides free drinking water to students, staff and visitors through the water system located on campus. These fountains are accessible in key areas such as university buildings, student centres and near outdoor spaces to ensure that**

Department head

**everyone has access to clean, safe drinking water. In addition, there are water dispensers for a fee.**

06-03-04

Does your university, as an institution, apply building standards to reduce water usage? (Relevant standards should be indicated)

**no information**

06-03-05

Does your university landscape in a way that reduces water usage? (For example, using drought-resistant plants)

**Yes, our university has taken several steps to reduce water usage through sustainable landscaping practices. The campus uses drought-resistant and native plants in many areas to minimize the need for irrigation. These plants are well-suited to the local climate and require less water than traditional landscaping. Additionally, the university has implemented efficient irrigation systems.**

#### **06-04 Water Reuse**

06-04-01

Does your university have a water reuse policy across the campus?

**No**

06-04-02

Does your university, as an institution, measure water reuse across the campus?

**No**

#### **06-05 Water in the Community**

06-05-01

Does your university, as an institution, provide educational opportunities for local communities to learn about good water management practices?

**Yes, our university offers a variety of educational opportunities for local communities to learn about good water management practices. These opportunities include:**

- 1. Workshops, seminar and Outreach Programs.**
- 2. Partnerships with Local Governments.**
- 3. Research and Community Engagement.**
- 4. Public Access to Research and Resources.**

06-05-03

Does your university, as an institution, support water conservation off-campus?

**Yes, our university actively supports water conservation efforts off-campus through various initiatives and community partnerships. It includes : study programs, final projects of master, doctoral theses and seminar results.**

06-05-04

Does your university, as an institution that extracts water (for example, from groundwater, lakes, or rivers), use sustainable water extraction techniques on university-owned land both on-campus and off-campus?

No

06-05-05

Does your university, as an institution, collaborate with local, regional, national, or global governments on water security?

**Yes, our university actively collaborates with local, regional, national, and even global governments on water security initiatives. These collaborations take various forms and are part of the university's broader commitment to addressing water-related challenges through research, policy advocacy, and community engagement.**

06-05-06

Does your university, as an institution, actively promote conscious water use on campus?

**Yes, especially through awareness.**

06-05-07

Does your university, as an institution, actively promote conscious water use in the wider community?

**Yes, our university actively promotes conscious water use in the wider community through a variety of initiatives and programs aimed at raising awareness and encouraging sustainable water practices. Here are some of the key ways the university supports and promotes conscious water use beyond its own campus:**

1. **Public Awareness Campaigns.**
2. **Partnerships with Local Schools and Organizations.**
3. **Community Water Projects.**
4. **Public Lectures and Workshops.**
5. **Research and Data Sharing.**
