SDG14 Life Below Water

14-04 Disposal of Water-Sensitive Waste

14-04-02

- Does your university as an institution have a policy to reduce plastic waste on campus?
- Yes, the University of Khenchela contributes to reducing waste in general, including plastic, through encouraging scientific research aimed at "Investment in Waste Recycling," and providing recommendations to establish recycling enterprises and spread environmental culture to reduce random dumping.

In Khenchela province, there are containers designated for sorting plastic waste and others, which have been distributed to municipalities with the aim of collecting and sorting plastic waste. The university works in cooperation with local authorities and other sectors to make the sorting and recycling process successful. The designated containers differ according to the city, and Khenchela has 2000 containers of a new type for selective sorting.

- **Containers and sorting:** Khenchela province was provided with 2000 new containers for selective sorting of household waste to collect plastic waste and other recyclable materials.
- **Efforts made:** Provincial services supervise, in cooperation with other sectors, waste collection and sorting operations for recycling.
- **University coverage:** Abbas Laghrou University is part of the waste management process in the province, as it is involved in waste collection and sorting plans with the aim of improving the living environment.
- **Cooperation:** These operations include cooperation with various actors such as university residences, directorates and municipalities, in addition to involving civil society organizations.

Objective: This project aims to achieve success in the selective sorting process and achieve sustainable development in the province.
