Does your university, as an institution, participate in collaborative planning to address climate-related disasters, which may include internal and cross-border displacement, by working with the government?

Yes, Abbas Laghrour University of Khenchela participates annually in collaborative programs and activities with local authorities and government agencies, aiming to address the impacts and challenges of climate change, including droughts and floods, through scientific seminars, awareness initiatives, and joint planning to enhance disaster response and adaptation.

Photos: A doctoral seminar at the Faculty of Law and Political Science highlighted the importance of Algeria's current national direction and the supervising ministry's focus on renewable energy, addressing climate change issues, and defining legal responsibilities, as these are considered threats to environmental security. The seminar also examined the positive and negative impacts of technological developments on sustainable development, reviewed efforts to address environmental problems, promoted sustainable management of natural resources, encouraged smart cities, and emphasized the use of artificial intelligence in environmental protection.
