**ON THE OCCASION OF WORLD WATER
 APRIL 14, 2026**

**WATER, A
 VITAL
 RESOURCE
 FOR A
 SUSTAINABLE
 FUTURE**

What is World Water Day?

World Water Day is celebrated every year on March 22 to draw attention to the importance of freshwater and the need for sustainable management of this resource. It supports Sustainable Development Goal No. 6, which aims to achieve universal access to safe drinking water and sanitation by 2030.

This day serves as a reminder that 2.2 billion people worldwide still live without reliable access to safe water.

Together for a sustainable future

Water is central to health, food, energy, and social justice.

“Water, a vital resource for a sustainable future”

Every action counts when it comes to preserving this precious resource.

World Water Day 2026 - Programme

Welcome and official opening

Scientific talks on:

- Water resources in Algeria
- Water management initiatives in Algeria
- Poster session on water related themes
- Presentation on the progress of water resource management projects in Khenchela Province, in coordination with the Khenchela ADE and other local institutions

Afternoon:

Scientific field trip to the Khenchela region, including an educational visit to Tagharist Dam in Yabous to discuss water management, conservation and awareness issues.
