Preamble

Building on the success of its inaugural edition, the 2nd Conference on AgroBioResources Sustainable Management: Animal & Plant Production (CABRSM 2026) emerges as a premier multidisciplinary platform dedicated to addressing the urgent challenges of global food security and environmental sustainability.

As the global population continues to rise, the demand for innovative, resilient, and eco-friendly agricultural practices has never been greater. CABRSM 2026 brings together leading researchers, academicians, industry professionals, and policymakers to bridge the gap between plant sciences and animal production. Our goal is to foster collaborative solutions that optimize the use of biological resources while preserving our natural ecosystems for future generations
